Company introduction

Ruma Automation is a company that distributes revolutionary new building automation system from various brands such as Amazon, Fibaro, Google, Samsung, Yale, etc. It allows homes and businesses to intelligently adapt and respond to the changing environment, perfectly optimising the comfort, safety and energy efficiency on behalf of the house owners or office occupants.

Our system allows you to control your home from your phone or tablet, or set up logical reactions to events - such as turning off lights in unoccupied rooms, emailing you a photo notification when somebody rings your doorbell or alerting you if your fridge breaks down. You can log into our system from any PC or Mac with an internet connection, anywhere in the world. Gone away on holiday and forgot to set your alarm? No problem. Log in from the beach and activate it remotely.

You can even control everything in your house using voice command. If this sounds like tomorrow's technology today, that's because it is. We believe that home automation is for everyone. We're looking for hard-working individual who will be able join our team and help to bring our solutions to the masses. If you've got a passion for everything you do, are excellent communicator and proactive approach – we'd love to hear from you.
